

Introducing the ChlorKing® AW-1 Acid Wash System

Cleaning the electrode stacks on your ChlorKing® system is now easier than ever before. We are proud to introduce the new AW-1 acid wash system.

This unique acid wash system allows you to clean your ChlorKing® cell without removing it from the cell housing. Cleaning is easy. Open and close a few valves and you're done.

This compact wash system comes with all the necessary connections, valves, magnetic drive pump and acid container.

Features And Benefits ...

- **Easy to install**

The AW-1 can be installed on existing systems. Inlet and outlet valves are added to the cell housing and the cleaning is made simple.

Installation is easy and takes no more than an hour.

- **Easy to use**

Using the AW-1 is easy, close the inlet and outlet valves to the cell housing, drain the water, open the AW-1 valves and turn the pump on. Let the acid circulate until the cell is clean. The pump will then evacuate the acid. Restore the valves to their original position and you're done.

- **Acid wash solution**

1 part acid to 5 parts water is the recommended solution for the containment unit.

- **Magnetic drive pump**

The ChlorKing® AW-1 comes standard with a magnetic drive pump that draws 1 amp at 120v.
